Automatic soap dispenser in chrome

White version

Order Code	Description
WSDA1W	Automatic soap dispenser in white
WSDA1C	Automatic soap dispenser in chrome

Washroom Hygiene Range

Fresh & clean facilities

Solenoid valve included with Water Manager

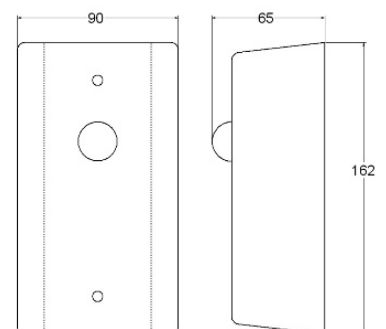

The **Water Manager** offers potentially huge water & financial savings. A typical cistern flushing four times per hour, every hour, will use 6048 litres of water per week. After the installation of a water manager, in a typical commercial building this would be reduced to 1440 litres. By only allowing the cistern to flush during periods of occupation, A SAVING OF 4608 LITRES PER CISTERN OR 76% is feasible. Thus a 12 hour hygiene flush = typically 76% savings on water bills

Programmable - Only allows flushing of automatic urinals during periods of occupation - Battery operated (4 x AA size alkaline - supplied) - Supplied with sensor head and valve. The valve can be fitted to the incoming water supply, controlling multiple urinals

Water Manager

Timings Wait	5 minutes to 1 hour wait time between flushes)
Timings fill	1 minute to 30 minutes filling time
PIR range	up to 4 metres
Rated power	4 x 1.5v 'AA' batteries
