

Order Code:

CBAC1S – Bactokill

The Bactokill has been designed and developed to destroy airborne bacteria and viruses.

By directing the air through two air chambers fitted with 60w high intensity UVC lamps, the unit can control the dwell time of air passing through them and over the UVC lamps.

It is during this time that the bacteria, moulds and viruses are virtually eliminated - making the Bactokill an essential tool in the fight against MRSA, SARS etc

The Bactokill is also being used heavily in a secondary application in destroying, not masking, stubborn malodours in areas such as nursing homes or changing rooms.

A full brochure with details of the independent test results and field trials is also available.

Actual size W 47.5 x H 45.5 x D 15 cm

Bactokill

Features

Approx. coverage – High speed: Room size 13ft x 10ft x 8ft room at 18.5 l/sec with 25% of furniture in room gives 100% kill rate at 3 changes per hour.

Low speed: Room size 10ft x 10ft x 8ft room at 14 l/sec with 25% of furniture in room gives 100% kill rate at 3 changes per hour.

Voltage - 230v
