COSAZM – AirZing Compact Pro

Germ killer to go: Osram announces the fight against viruses and bacteria with portable UV-C air purifiers.

Stopping the spread of germs and viruses has become more important in the current pandemic-ridden world. UV-C light - the effect of which has been known for over a century - has been proven to be a key to clean air indoors. The invisible, ultraviolet light destroys viruses and bacteria with a reliability of 99.9 percent.

With AirZing UV-Compact, available in Standard and Pro version, Osram is launching two portable products from a new portfolio that can be used effectively and easily to clean air indoors. The UV-C light is shielded inside the housing, which allows air purifiers to be used safely in the presence of humans and animals.
